How to use "`{{...}}`" Liquid Codes in "`set-body`" Policy Statement? The "`{{...}}`" "`set-body`" Policy Statement allows you to insert object properties of the `context` object in the `set-body` format and object properties of the built-in "`context`" object. For example `context.foo` will be replaced by the value of `foo` property of the built-in `context` object. - Rank: 128; Updated: 2017-12-04 02:26:33 ->
